Date: 22<sup>nd</sup> October, 2026

**PRESS RELEASE; THURSDAY 22<sup>ND</sup> OCTOBER, 2026**

### **MTRH REASSURES PUBLIC FOLLOWING PRECAUTIONARY EBOLA MONITORING**

Moi Teaching and Referral Hospital (MTRH) wishes to inform the public that one person is currently under quarantine for precautionary monitoring following reported contact with a suspected Ebola case aboard an aircraft 20 days ago.

The individual remains asymptomatic, with no fever, bleeding, vomiting or diarrhoea, and has tested negative for Ebola Virus Disease (EVD). The individual is being monitored in accordance with World Health Organization (WHO) and Ministry of Health protocols and is awaiting completion of the 21-day monitoring period before being cleared for release. All identified contacts have also been appropriately followed up.

MTRH reassures the public that all Hospital services continue uninterrupted. The Hospital remains fully operational and vigilant, with no disruption to patient care and other essential services. There is no cause for panic.

The Hospital continues to work closely with the Ministry of Health and other stakeholders to strengthen surveillance, early detection, infection prevention and control, case management and community engagement.

MTRH has a well-trained multidisciplinary Rapid Response Team and continues to conduct simulation exercises, departmental training and refresher sessions for frontline staff to ensure a timely, coordinated and effective response should the need arise.

**TO BE A GLOBAL LEADER IN THE PROVISION OF EXCEPTIONAL MULTI-SPECIALTY HEALTH CARE, TRAINING AND RESEARCH**

In addition, MTRH is intensifying public and community sensitization through triage areas, media engagements, religious and community leaders, and other local stakeholders. Particular attention is being given to communities associated with cross-border movement, including long-distance truck drivers, to promote awareness of EVD signs and symptoms, prevention measures, early reporting and appropriate referral.

Members of the public are encouraged to maintain proper hand hygiene, remain vigilant and follow Ministry of Health guidance. Anyone experiencing symptoms suggestive of EVD, particularly following contact with a suspected or confirmed case, should promptly seek medical attention and disclose any relevant exposure history to healthcare workers.

MTRH remains committed to protecting public health through heightened preparedness, continuous surveillance and coordinated response in line with national and international health protocols.
